**CHAMBERLAIN ACCESS SOLUTIONS DEALER  
DEVELOPS SOLAR-POWERED EQUIPMENT FOR SELF-STORAGE ACCESS CONTROL**

Scottsdale, AZ — August 20, 2009 — NU Enterprises, LLC, a Chamberlain Access Solutions dealer headquartered in North Carolina, is supporting the green movement in a serious way. And they are ready to share their developments with the rest of the self-storage industry.

According to Andy Benson, sales manager for NU Enterprises, the company has developed access control equipment that is powered entirely with solar energy.

"This is a first for our industry," Benson announced. "Our wireless solar system means that a facility can take advantage of green tax incentives, not to mention the benefits of an inexpensive installation process."

The keypad stand developed by NU Enterprises provides for wireless communications with PTI and Digitech access control products by Chamberlain Access Solutions. The keypad stand is designed for installation without costly trenching for power and requires no conduit linking the keypads to the office or the gate operator.

Benson is an enthusiastic fan of wireless systems as a solution, particularly when expenses have kept a facility owner from initiating a necessary upgrade or repair. The added benefits of potential tax credits and other green incentives make this the perfect time for the self-storage industry to join the green movement.

"Owners can also endear themselves with environmentally-aware consumers by marketing their business as a green facility," Benson pointed out.

A variety of federal incentives may apply and many states provide additional offsets to the cost of solar and renewable systems.
